

MUNICIPAL SERVICES

Olsson Associates' roots are in the relationships we have built over the years with municipalities across the Midwest, and those communities remain an important part of our business today.

We have a team focused solely on working with municipalities to create public infrastructure projects that will produce stronger and more livable communities. We are available to serve as your on-call city engineer. We can also assist you with projects as diverse as airport improvements, wastewater treatment plant designs, transportation planning and roadway designs, power plants, water quality testing, park and trail designs, and land development.
