

## WATER | WASTEWATER

The quality of life and the protection of public health and the environment depend on the condition of our water. We understand more than any that aging infrastructure, growth, and regulatory changes drive capital improvements to water and wastewater facilities. We also know that, left unaddressed, those same facilities can threaten the safety of this valuable resource.

Olsson Associates offers its clients a full spectrum of services, including a complete line of planning, design, permitting, and construction phase services. We understand chemical, physical, and biological processes and the compliance issues associated with regulatory requirements of the water and wastewater industries. Maintaining water quality is our number one concern, and we are able to respond to a broad set of client demands in a timely and cost-effective manner.

## WATER/WASTEWATER | SERVICES
